| TYPE OF VEHICLE | LICENCE PLATE NO. | | |
| A fall fall and a second fall and fall | | | |

Vehicles must be pushed into the pre-determined location, must have drip pans underneath them, and pads under all tires. The responsible parties of any vehicle, which drips any staining solution, will be charged cleaning costs. When motorized vehicles are approved for use on carpeted areas, a protective sheet of visqueen, tarpaulin or comparable material is to be used to eliminate damages.

Gasoline & Diesel

Gasoline vehicles must have full fuel tanks and the cap must be tightly locked. If they cannot be locked, they must be taped shut. The electrical system shall be disabled by either removing the battery or disconnecting both battery cables. Vehicles are not permitted to run their engine inside the venue and keys must always remain accessible on site in a secured container.

Electric

Electric vehicles used for display purposes must be re-configured to bypass the primary vehicle battery power and use an alternative temporary power source such as a trickle charger to demonstrate its capabilities. Where not possible due to inherent design, keys must be locked in a secured container with the container located outside of proximity of its remote-control functionality. Where charging is required, charging activity shall only occur during occupied hours under the supervision of a competent person.

Propane

Special permission is required for propane fueled vehicles prior to the event date. Please contact your Events Manager for approval.

Any damage that may occur to the building at time of move in or out shall be repaired and all charges for repair will be added to the master billing.
